

Dr Georgie D Boothroyd

I am a HCPC registered Clinical Psychologist and a BPS registered Clinical Neuropsychologist. Since obtaining my doctorate from the University of Oxford in 2009 I have specialised working with people with neurological and neurodevelopmental conditions. This includes within the NHS, independent and third sectors, encompassing a diverse range of the neuro rehabilitation pathway. I work both individually and as part of a multidisciplinary team. I specialise in the provision of neuropsychological services with a focus on differential diagnosis, treatment planning, psychotherapy, cognitive rehabilitation, behaviour management and assessments of mental capacity. I take pride in providing comprehensive and robust neuropsychological interventions for brain injury survivors, their families and support teams.
